SEAN MALONE

Engineering Manager (Hands-On) · Frontend & Design Systems · Team Building · AI-Assisted Engineering

Wylie, TX (remote, US) · sean@planetmalone.com · github.com/planetmalone · linkedin.com/in/malonesean · planetmalone.com

SUMMARY

Engineering leader with 18+ years in technology who manages people and still ships code. I have led teams from 2–3 developers up to a 50+ person application-development practice, where I hired, set OKRs, and coached the managers who reported to me, and I have personally built four design systems. Today I am a Staff Frontend Engineer at Aspira, owning the design system and accessibility standard and leading the team's AI-assisted engineering program. I lead through clear standards, steady 1:1s, and technical credibility, and I treat AI as an accelerator that still gets a human review on every line.

SKILLS

- **Leadership:** hiring and team building, OKRs and growth plans, 1:1s and skip-levels (Lattice), coaching managers, mentoring, technical strategy and roadmaps, architecture governance
- **Frontend:** React 19, TypeScript, Next.js, Remix, TanStack Start / Router / Query, GraphQL, Tailwind CSS, React Native
- **Design systems & accessibility:** React Aria Components, Storybook, design tokens, Figma, WCAG 2.2 AA audits
- **Architecture & delivery:** micro-frontends / Module Federation, SSR/SSG, BFF, Nx monorepos, Playwright, GitHub Actions, AWS
- **AI-assisted engineering:** Claude Code (skills, AGENTS.md, multi-agent workflows), multi-model verification, review-gated AI pipelines

EXPERIENCE

Staff Frontend Engineer — Aspira Sep 2025 – Present · Remote

Reservation, licensing, and park-management platform for state and provincial outdoor-recreation agencies; building NextGen, a ground-up rebuild of the platform in an Nx monorepo.

- Own the design system and accessibility standard for NextGen: authored the Figma design system and co-own the React component library every frontend engineer builds on. Peers route component-library changes through my review, and Product Design adopted a rule that every handoff must match the system.
- Kicked off and engineered the frontend AI-agent skills program: a skill-writer meta-skill plus 11 Claude Code skills grounded in codebase audits and verified across multiple models. The skills are used across the engineering organization (about 20 engineers on the codebase), and the backend team is adopting the approach. Every line agents write still gets a human review.
- Made the technical case to move the component library to React Aria Components, co-wrote the ADR, and led the migration in a six-engineer epic.
- Drafted the Senior UX Designer job description and sat on the design-hire interview panel; delivered the Customers domain UI for the platform's first client-sandbox launch as a Tiger Team member.

Senior Engineering Architect (Principal Frontend) — RedTeam Construction Aug 2024 – Sep 2025 · Remote

- Contributed code daily while architecting a micro-frontend platform (React, TypeScript, SSR/SSG, BFF on AWS) used by 5 teams and 50+ engineers; migrated 5 core applications onto it, cutting page loads from 5–6 s to near-instant.
- Served on the Architecture Committee as the organization's arbiter for accessibility, design consistency, and code quality; mentored engineers across levels.
- Introduced Playwright E2E automation (0% → 80%+ coverage across 7 apps) and a CI/CD platform that cut builds from 30+ minutes to under 5.

Senior Software Engineer (Lead, Artemis Design System) — Apollo.io Oct 2023 – Aug 2024 · Remote

- Lead engineer for Artemis, Apollo's design system: migrated 45 components to tokenized, accessible Storybook libraries, mentored junior engineers, and drove adoption through documentation, education, and automation tooling.

Stellar Elements (formerly projekt202) May 2015 – Oct 2023 · Dallas, TX

Technology Practice Director, Application Development (2021–2023) · Managing/Principal Architect (2018–2020) · Solutions Architect (2017–2018) · Senior Developer (2015–2017). Two stints: left for Redibs in 2020 and returned as Practice Director.

- Directed a 50+ person application-development practice (developers, DevOps, QA) through six managers at a digital-transformation consultancy; set the practice's OKRs and long-term growth plans, and owned hiring by writing the job reqs and hiring to the team.
- Coached engineering managers on being present, attentive, and nurturing; held weekly 1:1s with my direct reports and every-other-week skip-levels, and introduced a Lattice-based 1:1 and career-tracking process that took manager-to-report 1:1 cadence from under 50% to 100%.
- Led architecture and delivery of platform modernization and frontend replatforming for 4+ enterprise clients under Governance, Risk, and Compliance constraints.
- Stayed hands-on: personally built US Bank's consumer and internal design systems (React micro-frontends with Module Federation) with a ~10-developer team, then handed them off and returned to full Director duties.
- As Managing Architect, led a 4–6 person team as both client technical lead and internal people manager, with a 100% on-schedule record on every project I led; created the new-hire training program for recent graduates and industry transfers.
- Principal frontend architect for FedEx Office's unified commerce platform (11 teams, 100+ engineers under my technical direction); built its design and developer toolkit with a 3-developer team, and was lead front-end architect for Cox Automotive's Dealertrack platform (~7 teams).

Principal Frontend Architect — Redibs Oct 2020 – May 2021 · Dallas–Fort Worth

- Built the engineering team from 0 to 8 across web, mobile, UX, and QA; owned the technology roadmap and coding standards; delivered a greenfield Next.js web app and two React Native apps, and migrated a legacy monolith to Next.js (page load 7 s → under 1 s).

Earlier: UI/JavaScript Developer, Lead — Infor (PeopleAnswers), 2013–2015 (volunteered to bring the outsourced frontend in-house and led the new frontend team, a designer and a developer) · Developer — Epic Solutions, 2011–2013

EDUCATION

B.S. Computer Science — University of Texas at Dallas, 2013 · GPA 4.0, Summa Cum Laude

MILITARY

U.S. Army · 2003–2011 · Honorable discharge
