SEAN MALONE

Staff / Principal Frontend Engineer · React & TypeScript · Design Systems · Frontend Architecture · AI-Assisted Engineering

Wylie, TX (remote, US) · sean@planetmalone.com · github.com/planetmalone · linkedin.com/in/malonesean · planetmalone.com

SUMMARY

Staff Frontend Engineer with 18+ years in technology and 15 years building production web applications in React and TypeScript. I own design systems, accessibility, and frontend architecture for multi-team codebases, and have personally built four design systems, including the toolkit that kept 11 teams and 100+ engineers consistent at FedEx Office. I have architected micro-frontend platforms used by 5 to 11 teams and repeatedly taken page loads from seconds to near-instant. Over the past year I have led AI-assisted engineering at Aspira, from Claude Code skills grounded in codebase audits to review-gated AI pipelines. I give AI a lot of leeway, but I review every line it produces: it is an accelerator, not a replacement.

SKILLS

- **Frontend:** React 19, TypeScript, JavaScript, Next.js, Remix, TanStack Start / Router / Query / Table, React Hook Form + Zod, GraphQL, Tailwind CSS, React Native
- **Design systems & accessibility:** React Aria Components, Storybook, design tokens and token pipelines, Figma, WCAG 2.2 AA audits, automated accessibility checks in CI
- **Architecture & performance:** micro-frontends / Module Federation, SSR/SSG, BFF, Nx monorepos, Lighthouse and Core Web Vitals, virtualization and data caching, error-boundary standards
- **AI-assisted engineering:** Claude Code (skills, AGENTS.md, multi-agent workflows), multi-model verification, AI documentation pipelines, Claude Design, Figma MCP
- **Quality & delivery:** Playwright, Vitest, oxlint / ESLint, codemods, Nx generators, GitHub Actions, AWS (CloudFront, Lambda, S3, CDK), SST, Pulumi

EXPERIENCE

Staff Frontend Engineer — Aspira Sep 2025 – Present · Remote

Reservation, licensing, and park-management platform for state and provincial outdoor-recreation agencies; building NextGen, a ground-up rebuild of the platform (React, TypeScript, TanStack Start, React Aria, GraphQL) in an Nx monorepo.

- Own the design system and accessibility standard for NextGen: authored the Figma design system and co-own the React component library and Storybook that every frontend engineer builds on. Product Design adopted a rule that every handoff must match the system, peers route component-library changes through my review, and I ran three WCAG 2.2 audits on new admin surfaces.
- Made the technical case to move the component library from shadcn/Radix to React Aria Components (theming limits, accessibility defects, upgrade burden), co-wrote the ADR, and led the migration in a six-engineer epic, sequencing consumers into small changes instead of a big-bang rewrite.
- Designed a schema-driven form system (React Hook Form + Zod) for the Customers domain UI I delivered for the platform's first client-sandbox launch as a Tiger Team member; it is now the standard for forms across both NextGen teams.
- Raised the platform's quality floor through tooling: moved lint and format to oxlint/oxfmt with type-aware rules (about 30 seconds → 5), surfaced 4,400+ previously hidden findings, added Storybook accessibility tests as a CI gate, and built Nx generators so engineers and agents scaffold end-to-end tests the same way.
- Kicked off and engineered the frontend AI-agent skills program: a skill-writer meta-skill plus 11 Claude Code skills (component authoring, architecture, accessibility, TypeScript standards, testing, code review), each grounded in a codebase audit and verified across multiple models. The skills are used across the engineering organization and the backend team is adopting the approach.

Senior Engineering Architect (Principal Frontend) — RedTeam Construction Aug 2024 – Sep 2025 · Remote

- Architected a micro-frontend platform (React, TypeScript, SSR/SSG, BFF on AWS) used by 5 teams and 50+ engineers, enabling independently deployable apps; built first on Next.js, then moved to Remix where it better fit the platform's needs. Established error-boundary standards and BFF fallbacks for resilience.

- Migrated 5 core applications onto the platform, cutting page loads from 5–6 s to near-instant (tracked with Lighthouse and Core Web Vitals) through SSR/SSG, BFF strategies, and bundling optimization.
- Introduced Playwright E2E automation (0% → 80%+ coverage across 7 apps) and a CI/CD platform on SST, Pulumi, and GitHub Actions (builds 30+ min → under 5 min).
- Served on the Architecture Committee as the organization's arbiter for accessibility, design consistency, and code quality; mentored engineers across levels.

Senior Software Engineer (Lead, Artemis Design System) — Apollo.io Oct 2023 – Aug 2024 · Remote

- Lead engineer for Artemis, Apollo's design system, on a go-to-market platform serving 1M+ professionals; migrated 45 components to tokenized, accessible Storybook libraries, cutting story-to-PR cycle time ~25%.
- Drove adoption with codemods, linters, documentation, and a Figma-token pipeline that kept implementation in sync with design; advised teams on accessibility and performance.
- Rebuilt the core data grid on TanStack Table with virtualization and data caching, cutting load from multiple seconds to sub-second and interaction latency from ~1 s to negligible (~300% faster) on key pages.

Stellar Elements (formerly projekt202) May 2015 – Oct 2023 · Dallas, TX

Technology Practice Director, Application Development (2021–2023) · Managing/Principal Architect (2018–2020) · Solutions Architect (2017–2018) · Senior Developer (2015–2017). Two stints: left for Redibs in 2020 and returned as Practice Director.

- Principal frontend architect for FedEx Office's unified commerce platform (web, mobile, in-store kiosks): an Angular micro-frontend architecture (4 container apps, 10–15 micro-apps) delivered by 11 teams and 100+ engineers under my technical direction. Built its design and developer toolkit (component library, theming, docs site, code generators, lint rules) that every team built on.
- Lead Front-End Architect for Cox Automotive's new Dealertrack platform (used by ~80% of US dealerships): built the React micro-frontend architecture and the reference micro-app for ~7 teams, then transitioned ownership to the client's architects.
- Personally built US Bank's consumer and internal design systems (React micro-frontends with Module Federation) with a ~10-developer team while directing a 50+ person application-development practice.
- Lead UI Architect for ExamSoft's secure exam platform (~30 developers): eliminated the multi-second per-answer lag for exam takers without changing the platform's security posture. Recognized company-wide for a 100% on-schedule record as Managing Architect.

Principal Frontend Architect — Redibs Oct 2020 – May 2021 · Dallas–Fort Worth

- Led a greenfield Next.js web app (SSR/SSG, streaming) and the migration of a legacy monolith to it, cutting page load from 7 s to under 1 s; delivered two greenfield React Native apps and grew the team from 0 to 8.

Earlier: UI/JavaScript Developer, Lead — Infor (PeopleAnswers), 2013–2015 (brought the outsourced jQuery frontend in-house, ported it to Knockout then AngularJS, led the new frontend team) · Developer — Epic Solutions, 2011–2013

EDUCATION

B.S. Computer Science — University of Texas at Dallas, 2013 · GPA 4.0, Summa Cum Laude

MILITARY

U.S. Army · 2003–2011 · Honorable discharge
